AIM: To build an anonymous ftp scanner using ftplib module in python.

FTP Scanner:

A tool that automatically scans IPs/hosts for active FTP servers. It tests connectivity and credentials, reporting successful logins and vulnerabilities.

ftplib:

A built-in Python library for working with the File Transfer Protocol (FTP). It allows connecting to FTP servers, logging in, listing directories, and transferring files.

ALGORITHM:

1. Start.
2. Import the `ftplib` module.
3. Specify the FTP server hostname.
4. Connect to the FTP server.
5. Log in using the username **anonymous** and password **anonymous**.
6. If the login is successful:
 - Display the login status.
 - Display the server's welcome message.
 - Display the directory listing.
7. Close the FTP connection.
8. If the login fails, display an error message.
9. Stop.

PROGRAM:

```
import ftplib

def anonymous_login(hostname):
    try:
        # Connect to the FTP server
        ftp = ftplib.FTP(hostname)

        # Login using anonymous credentials
        response = ftp.login('anonymous', 'anonymous')
```

```

print(response)
# Check whether anonymous login is successful
if "230" in response:
    print("\n[*] FTP Anonymous Login Succeeded.")
    print("Server:", hostname)
    # Display welcome message
    print("\nWelcome Message:")
    print(ftp.getwelcome())
    # Display directory listing
    print("\nDirectory Listing:")
    ftp.dir()
# Close the FTP connection
ftp.quit()
except Exception as e:
    print("Error:", e)
    print("\n[-] FTP Anonymous Login Failed.")
# Main Program
hostname = "ftp.be.debian.org"
anonymous_login(hostname)

```

SAMPLE OUTPUT:
